I am a Ph.D. student in Computer Science at The Ohio State University, advised by Prof. Zhihui Zhu. My research focuses on representation learning and training dynamics in large language models, using these perspectives to advance mechanistic interpretability. In particular, I study linear phenomena in model representations: how a concept propagates during generation and whether it stays linearly represented along the way, and how training methods such as SFT and RLVR shape these structures. Before OSU, I received my B.S. in Computer Science from the University of Electronic Science and Technology of China (UESTC), where I worked with Prof. Zhao Kang on document-level relation extraction and Prof. Dong Hao on graph learning.

RESEARCH INTERESTS

Representation Learning · Interpretability · Training Dynamics
Representation & Behavior Steering · Agent Behavior Control

EDUCATION

The Ohio State University Ph.D. in Computer Science and Engineering, advised by Prof. Zhihui Zhu	2024 – Present Columbus, OH
University of Electronic Science and Technology of China B.S. in Computer Science · GPA 3.98 / 4.00	2020 – 2024 Chengdu, China
