My research examines how large language models represent concepts and how these representations evolve during generation and training. I focus on the linear structure of these representations and its role in understanding and steering model behavior, as well as how different training methods, such as SFT and RL, reshape these learned representations.

EDUCATION

The Ohio State University

Ph.D. in Computer Science and Engineering, advised by Prof. Zhihui Zhu

2024 – Present

Columbus, OH

University of Electronic Science and Technology of China

B.S. in Computer Science · GPA 3.98 / 4.00

2020 – 2024

Chengdu, China

RESEARCH EXPERIENCE

- **Concept representations.** Study how LLMs represent concepts, focusing on their linear structure, bidirectional features, and connections to model interpretability and behavioral control. Related work: [AbsTopK](#) (ICLR 2026).
- **Generation dynamics.** Study how concept representations evolve during generation and how steering propagates their influence on subsequent model behavior. Related work: [Self-reflection](#) (TMLR 2026); [Prefix Steering](#) (ongoing).
- **Training dynamics.** Study how training methods such as SFT and RL reshape concept representations, their linear structure, and their influence on behavior over the course of training. Related work: [Post-training Dynamics](#) (ongoing).
